

# Dual Cordless Phone IP800

Order part # IP800BK

Great for both the home and small office, the Oricom IP800 Dual Cordless Phone lets users talk for FREE at home and around the world.\*

Here's how.

The IP800 uses Voice over Internet Protocol (VoIP) technology which transforms Broadband into a phone line. This lets users save by making calls over the Internet instead of using a standard phone line.

The IP800 connects to both a normal telephone socket and a computer so that cheap Skype calls can be made over the Internet.

For greater convenience, users can also make/take two calls at the same time. And the phone comes with a full range of additional features.
